SitecoreAI Brand Kit

Demo-ready brand guidance for AI-assisted content creation

Purpose of this document

This PDF is designed to be uploaded as Evergy brand knowledge in SitecoreAI for a sales demo. It consolidates public Evergy positioning, service themes, customer messaging, voice guidance, visual direction, image guidance, and governance rules into a structure aligned with SitecoreAI Brand Kit sections.

Demo use note: This is not an official Evergy brand standards manual. It is a demo-ready synthesis based on publicly available Evergy information, with reasonable supplemental guidance added to help SitecoreAI populate most brand-kit fields.

Brand name	Evergy
Company name	Evergy, Inc.
Industry	Regulated electric utility / energy services
Primary audience	Residential customers, business customers, communities, regulators, employees, and investors in Kansas and Missouri
Service region	Kansas and Missouri
Primary promise	Reliable, affordable, sustainable energy that helps customers manage everyday life and plan for the future
Suggested logo input	Use the official Evergy logo artwork from approved Evergy sources when available. Do not recreate the logo from this document.

1. Global Goals

Mission, vision, values, and high-level priorities that should guide AI-generated content.

Mission

Empower a better future by delivering clean, safe, reliable, affordable energy and customer-focused solutions for Kansas and Missouri.

Vision

Be a trusted regional energy partner that keeps power flowing while helping customers, businesses, and communities make smarter energy choices.

Core brand goals

- Reliability: reinforce dependable service, grid readiness, storm response, and planning ahead for growing demand.
- Affordability: help customers understand bills, compare usage, select rate or payment options, and reduce waste.
- Sustainability: present renewable and clean energy progress as part of a balanced, practical energy mix.
- Customer empowerment: make it easy to pay, manage alerts, understand usage, report outages, and choose energy programs.
- Community commitment: show Evergy as a neighbor that supports local growth, safety, resilience, and quality of life.
- Innovation with purpose: use technology, analytics, grid modernization, and digital tools to improve customer outcomes.

Values to emphasize

- Safety first for customers, employees, contractors, and communities.
- Operational excellence and preparedness.
- Transparency around costs, usage, outages, and energy choices.
- Local accountability across Kansas and Missouri.
- Practical sustainability - cleaner energy without losing sight of reliability or affordability.

2. Brand Context

Background, positioning, audience needs, and demo-use messaging pillars.

Brand background

Evergy was formed in 2018 through the combination of KCP&L and Westar Energy. The name combines ideas of enduring service and energy, signaling a modern, future-focused utility rooted in long-standing regional service. Evergy serves more than 1.7 million customers across Kansas and Missouri and operates a large transmission, distribution, substation, and generation footprint.

Brand positioning

Evergy is a modern Midwest energy company helping customers count on power today while preparing for the energy needs of tomorrow. The brand should feel dependable, local, forward-looking, clear, and useful.

Messaging pillars

- Power you can count on: planning, maintenance, grid investment, and storm readiness keep daily life moving.
- Energy made understandable: usage, billing, rate plans, alerts, and support tools help customers take action.
- Cleaner energy, practical path: a balanced generation mix supports reliability, affordability, and reduced environmental impact.
- Your local energy partner: Evergy supports homes, businesses, hospitals, schools, and regional economic development.
- Technology serving people: digital tools, alerts, outage maps, and energy analysis should be presented as convenient and human-centered.

Audience guidance

Residential customers	Need plain-language explanations of bills, outages, safety, energy use, payment choices, alerts, and ways to save.
Business customers	Need reliability, cost predictability, energy efficiency, economic development support, and clear service information.
Communities	Need evidence that Evergy invests locally, plans responsibly, and supports resilience, safety, and growth.
Regulators / public officials	Need balanced language around affordability, reliability, sustainability, rate regulation, and customer impact.
Investors	Need disciplined, credible language around operational performance, infrastructure, clean energy, customer growth, and value creation.

Recommended content themes for SitecoreAI demos

- High-bill explanation and prevention: analyze usage, weather, missed payments, rate plan fit, and seasonal demand.
- Outage readiness: proactive alerts, restoration expectations, safety steps, and regional storm response.
- Energy efficiency education: practical tips tailored by home type, season, and usage patterns.
- Grid reliability storytelling: behind-the-scenes operations, inspections, modernization, and demand planning.
- Renewable and clean energy options: customer participation, business programs, and balanced generation education.
- Payment support: paperless billing, average payment plans, assistance programs, and flexible options.

3. Dos and Don'ts

Content generation guardrails for AI assistants, page copy, campaign content, translation, and personalization.

Do

- Lead with customer value: what the customer can understand, do, save, avoid, or prepare for.
- Use plain language for billing, outages, rate plans, weather impact, energy usage, and payment support.
- Balance optimism with practical utility. Evergy should sound helpful and capable, not promotional at the expense of trust.
- Acknowledge uncertainty during outages or weather events and provide the next best action.
- Use inclusive regional language such as Kansas and Missouri communities, customers, homes, and businesses.
- Connect investments and technology to outcomes: reliability, affordability, safety, easier service, and cleaner energy.
- Make CTAs action-oriented and specific: Compare my bill, Report an outage, View rate options, Sign up for alerts, Learn how the grid works.

Don't

- Do not overpromise restoration times, savings, bill reductions, availability, or emissions outcomes.
- Do not blame customers for high bills, late payments, or outage impacts. Use neutral, helpful language.
- Do not use fear-based, alarmist, or overly technical language unless safety requires urgency.
- Do not present renewables as the only energy source. Explain that reliability is supported by a balanced mix.
- Do not use political or polarizing language around energy policy, rates, climate, or regulation.
- Do not imply Evergy is unregulated or free to set rates independently.
- Do not use stock photography that feels generic, coastal, urban-megacity, or disconnected from Midwest service communities.

Sensitive topics

High bills	Be empathetic. Explain likely causes such as weather, longer billing periods, usage changes, payment carryover, rate plans, or fees. Offer analyzer tools and support options.
Outages	Prioritize safety, status, reporting, estimated restoration when available, and sign-up for alerts. Avoid certainty when crews are still assessing damage.
Rates	Use regulated-utility language. Mention that rates are reviewed and approved by Kansas and Missouri regulatory commissions when relevant.
Sustainability	Use credible, pragmatic wording. Pair cleaner energy with reliability, affordability, and a balanced energy mix.
Assistance	Use respectful language: financial help, payment options, support programs. Avoid stigmatizing phrasing.

4. Tone of Voice

The desired Evergy voice for website copy, alerts, educational articles, promos, and AI-generated content.

Voice attributes

Helpful	Give customers the next step. Explain what is happening and why it matters.
Dependable	Sound calm, capable, and prepared. Reinforce trust and operational competence.
Clear	Use short sentences, familiar terms, and scannable structure.
Modern	Use digital-first wording around alerts, analysis, usage data, and account tools.
Community-minded	Show local commitment without sounding self-congratulatory.
Practical	Focus on concrete benefits and actions rather than abstract claims.

Tone by scenario

Outage / emergency	Calm, direct, safety-first, action-oriented.
Billing / high bill	Empathetic, explanatory, nonjudgmental, solution-oriented.
Energy efficiency	Encouraging, practical, empowering, specific.
Sustainability	Optimistic, credible, balanced, future-focused.
Grid reliability	Confident, educational, operationally grounded.
Corporate / investor	Measured, factual, disciplined, value-focused.

Sample voice

- Instead of: Your bill is too high because you used more energy. Use: Your bill is higher than usual. See what may have changed - from weather and usage to payment timing.
- Instead of: We are revolutionizing the grid. Use: We are planning ahead and investing in the grid to support reliable service as energy needs grow.
- Instead of: Go green today. Use: Explore renewable energy options and simple steps that support cleaner energy choices.
- Instead of: Click here. Use: Compare my usage, Check outage status, View payment options, or Learn how we prepare.

5. Checklist

A quick QA checklist for reviewing SitecoreAI-generated Evergy content before publishing.

- Content clearly helps the customer understand, act, prepare, or make a choice.
- Claims about savings, restoration times, rates, clean energy, or reliability are qualified and credible.
- Language is plain, local, useful, and not overly promotional.
- High-bill and payment-support content is empathetic and nonjudgmental.
- Outage and safety content includes next steps and avoids false certainty.
- Sustainability content balances cleaner energy with reliability and affordability.
- CTA is specific and action-oriented.
- Visuals reflect Midwest energy, homes, businesses, crews, infrastructure, weather, and clean technology.
- Accessibility is considered: readable contrast, descriptive alt text, meaningful link text, and no image-only critical information.
- Content avoids political, regulatory, legal, medical, financial, or guarantee language beyond approved facts.

6. Grammar Guidelines

Writing rules and conventions for consistency across Evergy demo content.

General writing style

- Use sentence case for headings and buttons unless the system style requires otherwise.
- Use contractions sparingly in customer-facing copy when they improve warmth: We'll, you're, it's. Avoid in formal investor or regulatory content.
- Prefer active voice: We monitor the grid, Crews are assessing damage, Compare your usage.
- Use numerals for measurements, dates, times, dollars, percentages, kWh, miles, and temperatures.
- Keep paragraphs short, ideally 1-3 sentences for web copy.
- Use em dashes sparingly. For ingestion compatibility, use standard hyphens in this document when possible.
- Avoid jargon. If a technical term is necessary, explain it in the same sentence.

Preferred terms

- Use Evergy, not the Evergy, except where grammar requires it.
- Use customers, not ratepayers, except in regulatory contexts.
- Use power or energy based on context: power flowing, energy use, energy bill, reliable power.
- Use outage alerts, outage map, restoration updates, and report an outage consistently.
- Use energy usage or energy use rather than consumption in customer-facing copy.
- Use clean energy or cleaner energy when referring broadly to reduced-impact sources; use renewable energy when specifically referring to wind, solar, or subscription programs.

CTA style

- Start with a verb: Compare, View, Sign up, Report, Learn, Check, Explore.
- Be specific: Compare my bill is better than Learn more for a billing analyzer.
- Use first-person CTAs when appropriate for account experiences: Compare my usage, View my options.
- Keep CTA length to 2-5 words when possible.

7. Visual Guidelines

Visual standards for demo pages, promos, landing pages, and article graphics.

Color palette

Swatch	Name	Hex	Use
	Deep Evergy Navy	#003A5D	Primary backgrounds, headlines, footer, serious operational content
	Evergy Blue	#2C7DC1	Links, buttons, charts, digital UI accents
	Evergy Green	#77BC3E	Sustainability, success states, energy efficiency, positive accent
	Light Blue Gray	#EAF3FA	Background panels, cards, data visualizations
	Warm Alert Orange	#F5A623	High-bill alerts, weather, caution, secondary highlights
	Charcoal	#1F2A33	Body copy, neutral UI, text on light backgrounds

Layout principles

- Use clean, spacious layouts with clear hierarchy and accessible contrast.
- Use navy backgrounds for reliability, grid operations, and corporate credibility; pair with bright blue and green energy accents.
- Use card-based modules for calculators, analyzers, alerts, and comparison tools.
- Use charts and iconography to simplify complex energy information, but avoid chart clutter.
- Keep promo copy short and action-led. Pair one primary message with one clear CTA.
- Use rounded cards, subtle shadows, and modern digital UI cues to signal convenience and account self-service.

Logo guidance

- Use official Evergy logo assets only. Do not redraw or approximate the mark.
- Maintain clear space around the logo; avoid crowding with headlines, buttons, or partner logos.
- Use the full-color logo on light backgrounds and reversed/white logo on dark navy backgrounds when approved assets are available.
- Do not stretch, rotate, recolor, outline, add effects, or place the logo on visually busy imagery.

Iconography

- Use simple line icons with rounded corners and consistent stroke weight.
- Use icons for electricity, bill, alert, usage graph, outage map, weather, home, business, EV, wind, solar, safety, and support.
- Avoid overly playful icons. Icons should feel useful and modern, not cartoonish.

8. Image Style

Guidance for image generation, stock selection, article graphics, and demo creative.

Photography style

- Real, regional, and practical: Midwest neighborhoods, Kansas and Missouri landscapes, homes, small businesses, substations, transmission infrastructure, crews, control rooms, and weather.
- Natural light, authentic scenes, and human-centered composition.
- Show reliability through preparation, teamwork, technology, and infrastructure rather than dramatic crisis imagery.
- Show sustainability through wind, solar, EV charging, efficient homes, trees, and clean landscapes, balanced with grid infrastructure.
- Avoid generic city skylines that do not match Evergy's region, unrealistic futuristic utilities, or overly dramatic disaster imagery.

Illustration and digital graphic style

- Use semi-realistic or clean vector/3D illustrations for explainers, analyzers, and tools.
- Prefer navy-blue digital interfaces with cyan/blue data lines and green accents.
- Use UI mockups to show bill analysis, usage charts, outage map pins, alerts, and energy tips.
- Keep generated images free of embedded text when the CMS provides separate editable copy fields.
- Use square crops for promos and wide horizontal crops for headers with open space for overlay text.

Alt text guidance

- Describe the function and subject of the image, not every decorative detail.
- Example: Evergy control room operator monitoring regional grid conditions on multiple screens.
- Example: Illustration of a utility bill with a magnifying glass and energy usage chart.
- If an image is decorative and the adjacent text conveys the message, use empty alt text in implementation.

Image prompts for SitecoreAI demos

- High Bill Analyzer: Square image, no text, clean modern utility-brand illustration of an energy bill with usage chart, magnifying glass, alert icon, weather sun icon, and subtle blue/green Evergy-style accents.
- Grid reliability article: Wide image, no text, professional control room at dusk, operator monitoring a Midwest regional power grid map, transmission lines visible through window, deep navy and electric blue tones with green data accents.
- Outage preparedness promo: Square image, no text, family home in a storm-ready neighborhood with mobile outage alert on phone, flashlight and safety kit nearby, calm reassuring mood, navy-blue and green utility palette.
- Energy efficiency article: Square image, no text, smart thermostat, insulated window, LED bulb, and usage chart visual, bright natural home environment with blue and green accents.

9. Glossary and Localization

Terms, preferred usage, and localization notes. SitecoreAI may require this section to be entered or refined manually.

Term	Guidance
Evergy	Brand name. Keep unchanged in all languages unless legal/local guidance says otherwise.
High Bill Alert	Notification that energy use is higher than usual. Use title case for the program name.
High Bill Analyzer	Demo tool name for explaining possible causes of a higher-than-usual bill.
Outage Alerts	Proactive text or email notifications related to outages at a customer address.
Outage Map	Map used to check outage status and affected areas.
Energy use / energy usage	Preferred customer-facing terms. Avoid consumption unless technical context requires it.
Rate plan	Customer-friendly phrase for pricing plan or tariff option.
Average Payment Plan	Program that can make bills more predictable by leveling highs and lows.
Renewable Resources	Programs and information related to renewable energy such as wind and solar.
Clean energy	Use for broader low- or zero-emissions sources when supported by factual context.
Grid reliability	Ability to deliver dependable power through planning, maintenance, modernization, and response.
Restoration estimate	Use carefully. Do not imply a guaranteed time unless a system-provided estimate exists.
Kansas Corporation Commission	Regulatory body for Kansas utility rates; spell out on first use.
Missouri Public Service Commission	Regulatory body for Missouri utility rates; spell out on first use.

Localization rules

- Keep Evergy unchanged as a proper noun.
- Do not translate legal entity names or regulator names unless an approved localized equivalent exists.
- Translate customer actions clearly and directly; prioritize comprehension over literal wording.
- For Spanish content, use respectful, clear language and avoid overly formal legalistic phrasing unless required.
- Measurement and billing terms should follow local/regional customer expectations and approved regulatory language.

10. Sample Brand-Aligned Content

Reusable examples for demos and regression testing.

Article landing page hero

Title	Energy insights for everyday decisions
Text	Explore practical articles on bills, outages, energy use, grid reliability, and smarter ways to manage your service.
CTA	Browse articles

High bill promo

Eyebrow	High bill insight
Title	See what may have changed
Text	Your bill can shift because of weather, usage, billing timing, rate plan fit, or payment activity. Use the High Bill Analyzer to review possible causes and next steps.
CTA	Analyze my bill

Grid article promo

Eyebrow	Grid reliability
Title	How Evergy prepares for peak demand
Text	See how weather monitoring, usage forecasts, field crews, and grid investments help keep power flowing when demand is highest.
CTA	Read the article

Outage alert promo

Eyebrow	Outage readiness
Title	Know what is happening when the power goes out
Text	Get proactive outage updates for your address, check restoration progress, and find safety guidance when storms affect your area.
CTA	Sign up for alerts

Energy efficiency promo

Eyebrow	Energy savings
Title	Find small changes that can add up
Text	Compare your usage, review seasonal tips, and discover simple ways to make your home more energy efficient.
CTA	Compare my usage

11. Source Notes

Public sources used to synthesize this demo brand kit.

- SitecoreAI Brand Kits documentation: brand kits use uploaded PDFs to populate sections such as Global Goals, Brand Context, Dos and Don'ts, Tone of Voice, Checklist, Grammar Guidelines, Visual Guidelines, Image Style, and Glossary and Localization.
- Evergy Our Company: Evergy emphasizes next-generation infrastructure, reliable, sustainable, affordable energy, affordability, reliability, safety, and community.
- Evergy Company Facts: Evergy serves more than 1.7 million customers in Kansas and Missouri; operates across four service areas; and has a large transmission, distribution, substation, and generation footprint.
- Evergy Investor Company Information: Evergy's mission is to empower a better future and it provides clean, safe, reliable energy through operating subsidiaries in Kansas and Missouri.
- Evergy Welcome page: public customer programs include outage alerts, weekly energy analysis, high bill alerts, renewable resources, rate plan options, paperless billing, average payment plan, and financial help.
- Evergy newsroom photo library: source categories include branded images, Evergy images, operations, employees, wind farms, storm restoration, and time-based rates.
- Global Prairie Evergy rebranding case study: positioning focused on reliable, enduring energy, customer service, energy innovation, and a modern, energized logo system.
